

Assembling your chain curtain

Contents:

1 x Header bar cut to the width dimension given.

Continuous lengths of chain.

Attaching the chain:

<p>1. Place the header bar on a flat surface (bench, table or floor) as shown and hold in place with clamps or by hand.</p>	
<p>2. Measure from the top of the header bar down to the total height dimension given when you ordered. Mark this point.</p> <p><i>Note: – you may wish to create a straight line using a piece of masking tape parallel to the header bar to make it easier to measure the length of each strand of chain.</i></p>	 
<p>3. Take the end of the chain and using a flat headed screwdriver open up the first link</p>	

4. Insert the open link through the first hole on the header bar (from the underside).

5. Extend the chain to the point you marked earlier ensuring there are no kinks along the length then open the link closest to your point and unhook the chain.

6. Take the chain back to the header bar so that you can locate it in the next hole. Repeat this process until all holes have a chain attached.

7. Close the open links on the header bar with your fingers or a pair of pliers.

Hang your curtain using brackets provided
