

Inserting your intermediate clips

If you have any questions regarding this process please contact us on 01628 481919

Your intermediate clips come as a pair, left and right handed. Please see image below.

Bottom of clip

Insert your clips into the bottom end of each guide. Slide them into the back of the guide, i.e. the opposite end to the brush pile. See image below.

Left hand guide.
Wedge on the
clip sits to the
front of the guide

Right hand
guide. Wedge
on the clip sits
to the front of
the guide

Once they are pushed into the guide insert an allen key into one of the grub screws and slide the clip up the guide to the required position. Note that the top of the handle bar sits under the clip so the opening will be about 40mm lower than the bottom of the clip. See image below

Once in the required position tighten both of the grub screws. Now you can fit your guides as per the fitting instructions.
